

Hot Debrief

Created by: Dr. Arthur Welsher, Dr. Priyank Bhatnagar and Dr. Alia Dharamsi

University of Toronto, Department of Medicine, Division of Emergency Medicine

Module- “Debrief While It’s Hot”

Hot debriefs are a structured method of conducting facilitated verbal debriefs with team members shortly after critical incidents in acute care settings (ex. Resuscitations, near-misses, sudden patient deterioration, etc.). This module was created to define the components of a hot debrief and how to facilitate one.
